

Guide to Clone Salesforce Objects Using migSO

Salesforce by default does not provide any option to migrate custom objects performing it manually from one org to another is a daunting task. This is where migSO is a lifesaver. Let's first get a brief about custom objects and then discuss the steps involved in migrating them from one object to another with migSO.

Custom Object refers to a user-defined data structure that enables you to store confidential business data. Each custom object can have custom fields, validation rules, Record types, and field sets and can be customized to fit your specific requirements.

migSO is a native Salesforce app built that helps you to clone, export, and manage Salesforce metadata in a single platform. With just a few clicks, it lets you clone mass custom objects from one org to another.

Detailed Steps to Clone Mass Custom Objects Using migSO

Cloning mass custom objects on your Salesforce org has now become a breeze with migSO! All you need to do is follow the given steps after installing our package:

Step 1. Open migSO via App Launcher

Step 2. Select Clone Wizard

Step 3. Select Metadata Item

Step 4. Select Source Org

Step 5. Choose Objects & Deploy

Step 6. Review Deployment Status

Step 7. Set Fields Permission

Step 8. Download Report

Woohoo! You have successfully deployed cloned custom objects from one org to another.

Going through the Migration Wizard Logs

- You can access the deployment history by moving to **Migration Wizard Logs**.

You'll find a list of all metadata operations executed on your org with specified dates.
